## DESIGN REVIEW MANUAL

### ADDENDUM #3

#### Clarification on the Installation of Basketball Backboards and Hoops

A pipe or any structure supporting a basketball backboard and hoop which is cemented or buried below grade and cannot be readily removed and stored out of sight when not in use is considered a violation.

Exception:

A sleeve may be cemented or buried flush with the existing grade to act as an anchor for the supporting pipe of the basketball structure.

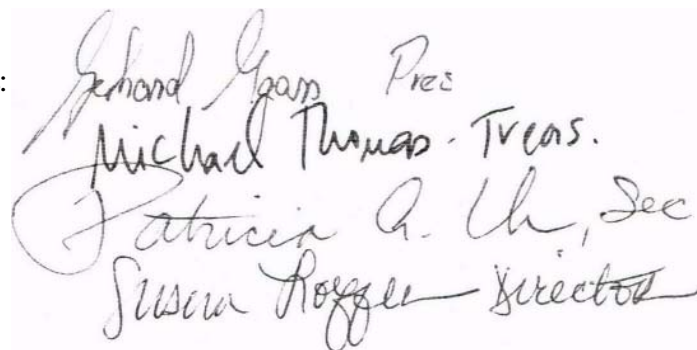

The inside diameter of the sleeve must exceed the outside diameter of the standpipe of the basketball hoop, so the entire structure can be easily removed.

Design Review Board approval is needed for this application. No approval for free standing removable basketball structures is needed.

Adopted by the Board of Directors
